

ABSTRACT

Title: Public swimming in Roudnice nad Labem

Target: This thesis aims to explore the public's interest in swimming, chart the course of their visits to the swimming pool and find out personal interest in improving swimming techniques. Assess the importance of the swimming section for the public with regard to the possibility of physical activity for children and youth.

Methods: Information from public in Roudnice nad Labem were obtained by using questionnaires. The results of the questionnaires were evaluated by statistical and graphical methods. Pool attendance in years 2009-2013 was evaluated by comparative method.

Results: It was found that most of the interviewed public are satisfied with the existing swimming pool and the services which are provided. Despite high satisfaction, the public is interested in the completion of the outdoor swimming pool. The average length of stay of visitors to the swimming pool is 90 minutes and during one visit. From this residence time, the majority of public swimming devotes 40 minutes. For swimming uses 63% breaststroke technique, 35% technique crawl and 2% technique backstroke. The possibilities of improving their own private swimming techniques the public has a negative attitude. However, interested in subscribing the children and youth in the swimming club is high. Usefulness of the swimming pool with a view of past years shows an upward trend. The exception was 2013, when floods hit the swimming pool and had to be more than half the year closed.

Keywords: Swimming, swimming public, swimming pool, swimming club.
